

ANGELIC FEELINGS

An Essay on Angels & The Role of Human Emotional Energy in our Galaxy or Why Sustainable Star Birth Requires Collective Bardo (Perhaps Angelology was unpopular among physicists for the same reason Einstein couldn't model the infinite compression which would bend time — in both cases it was a fit problem onto the head of a pin, which only fractal/recursion solves.)

When I was 21, having just quit my position at IBM, I went to study Gurdjieff's Sacred Gymnastics at Claymont in West Virginia, the site of George Washington's nephew's plantation. My body was intellectually quite mature; I was already quite an egghead. However, emotionally and glandularly I was definitely a late bloomer. My feeling body could have been described as very boyish. At that time, I had never had a sexual relationship. I was/am astrologically a double Scorpio, (11/13/52, 6 am, Gowanda near Buffalo, NY) so I was exploding with base of the spine sting energy. Also, at that time I migrated from a college student's lousy chi diet, to a largely live food, whole grain diet at the community.

All of this meant that I was ripe for an emotional ex(im)plosion. I have this vivid memory of walking down the long overgrown green path between the mansion and the huge octagonal old show barn we were converting into a sacred gymnasium. It was a lovely summer day; I was well rested and well nourished. I was miles from significant power lines or traffic.

I happened to walk within inches of a snake. Although the serpent was not particularly big, the suddenness of the event sent a very sharp shiver up my spine. What I remember so vividly about the event was that the shear juice or amperage of the "jimmy willy" rushing up my spine was huge, and far greater than anything I could remember.

In retrospect I came to realize that the actual ability to have high amperage emotions, was learned. First the glands learn the skill to digest certain foods. Spinach for example contains food elements that are not able to be practically braided into sweetness, until later in the evolution of the digestive glands' learning. Hence young kids classically don't like the taste of spinach because they haven't acquired the glandular and geometric skill to rearrange the food elements contained in spinach into a nice braid.

We measure the density of braid and that is the molecular definition of sweetness. Well, emotions are digested in a very similar way. Certain elements of magnetism are processed or consumed by the

glands. Just as an Aboriginal dance sends a collective shiver down a song line to be caught by a shaman across the continent, the skill to braid long wave magnetics into standing wave field effects begins with the shamanic skill to use glandular emotion to effect environment — the land becomes inhabited with the long wave of feeling.

It takes time to acquire the skill to eat magnetism from the land's long wave, and, by focusing and centering the spin arrays, give that magnetism a kind of eternity, by adding the "wormhole to center," or "spin path to zero point," which creates gravity. Gravity is a name for the onset of recursive centering, which permits wave systems to participate in the universal phase discipline or the connectedness of the collective mind. This "G Ray of Vita" allows waves that enter the "Phi-Rays" of self-embedding to stand or stabilize their spin. Gravity is the scalar one way inward wind of magnetic wave implosion perfecting connectivity. Gravity does not exist in the absence of Eros. When Gurdjieff said planets experience their relationship in gravity erotically, he was pointing to a deep and wonderful principle.

Suppose you had learned how to dance with a new lover in a way that allowed every gyration in spin to send a new wave of sweetness coursing through your body. This learned skill of the geometry of the dance, would then become sustainable. This would make your relationship able to stand as wave.

The flamenco dance is a foot step trace of the Greek key. Revolve the Greek key and you get the Cretan labyrinth. Key was Chi or cross in Greek. The stars of Orion make a cross at the belt where stars are born. If you had learned your "flame-in-go" dance, improperly, the steps would begin to cancel each other out, and the dance would stop. If you learn the dance in perfect recursive symmetry, then the dance would create a magnetic 4D time wave for your glands to cat's cradle a new dimension in the memory of feeling.

This is the way planets learn gravity.

Only certain spin patterns are sustainable. The best sustainability is the best recursiveness. The best recursiveness is the best self-embeddedness/self-reference/self-awareness. The best way for a wave to re-enter self is Phi: The Golden Mean Spiral. Should we now guess why the orbital time ratios of Earth/Venus/Mercury are Phi? Or why the recursion in time is Phi? Why the spectral emission lines of hydrogen enter Phi ratio? Gravity is built on Phi, the Golden Mean. What could the d, f electron subshells, as a 5/7, symmetry group be but dodeca/icosa? One could not assemble these shapes without Phi.

So back to the Gurdjieff school. There I was, the elements to put the juices of long wave magnetics into my glands were present:

Diet with CHI or life force.

Land with chi or life force.

Seal of Truth

Hyper-cube

24-cell

Housing without ELF magnetic pollution.

A new body with astrological scorpionic CHI.

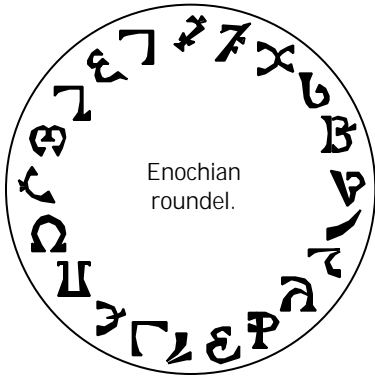

I was in the magnetic saturation mode: glands eating more magnetic braidedness than ever before. So the ability to digest and emote magnetism preceded rapidly. I was preparing a container for feeling, which was useful to the angels.

Remember the fascination of the galactic council, as reported by various contact groups, with the rate at which human emotion could turn on a dime? Our technology as a civilization may be childish, but our glandular emotion is the key to our galactic usefulness. We as a gene pool may be the solution to the long humanoid vs. Draco/reptiloid struggle between compassion/biology-based cultures vs. technology/aggression-based cultures. The place where the reptilian brain meets the high fractal cortex, where the passionate emotions meet the high fractality of reason, may be the alchemical melting pot to heal a trans-galactic family feud among the angel families.

Let us put our considerations of the physics of angel bodies in the context of a very nice question. Why does the birth of stars require evolved consciousness entering collective Bardo/death experience? In other words, why does it take specifically some form of great angelic-incarnating awareness to make a star system's birth unpack into proper interstellar life? In order to look at the gravity of this fascinating question let us review what we apparently know so far about the physics of angels.

John Dee, after learning most of the languages of Earth, asked to be taught the true language of light. The Ophanim Angels taught him the Enochian Keys or Calls. These glyphs were a symmetry superset of Hebrew (we should say H'Iburu) which is the spiral symmetry elements of tetra/cube necessary to tilt DNA codons into a Golem or artificial life-form. (Slaves to mine gold, originally, the an-droids were the basic non-self replicating, non-soul embodied life forms.) The H'Iburu priests were gene splicers with little compassion for their droids, and no discipline for sexual lineage to maintain strong DNA.

When it was discovered that the Ophanim language script was based on hyper-cube, and other 4D solids, glyph symmetry, we got a clue to the turns necessary to braid light through the superluminal. Hypercubes require Phi. Cubes of local realities can nest in the next spin dimension only in the 5 cube dodeca/hypercube. This form is all Phi spin paths for light waves, allowing the wave fronts to add and multiply in time and space. This meant that wave length and wave velocity could add and multiply successively without destructive interference. This angelic language symmetry created the matrix of biology's only geometric Door through the speed of light, and therefore through time.

The angelic language symmetry set of the Ophanic keys reveals how to get the threads of light lines through black holes or star-gates. This is important because angels are names for magnetic bodies with enough turn and braid coherence to inhabit — feed magnetic pressures sustainably/recursively into — Time. Time travel is as simple as seeing how a wave front moving at harmonics faster than light, could get around the spin of the Earth in the Solar system, fast enough to visit the site of our planetary convergence of wave fronts — next year. The harmonics above the speed of light, become the relative surf or warp velocity angles through time. These harmonics above the speed of light which only perfect Phi recursion gravitational and genetic wave implosion braid or feed, are regulated by angels to create order in time, just as we regulate the bandwidths of radio stations to make communication sustainable. Since the pathways or bandwidths of time become themselves sustainable when self-embeddable, or Phi based, therefore they become self-aware or inhabitable.

This becomes the magnetic flux physics of angelic presence. (This will become much more personable an idea when we discuss the recent history of angel families.) Thus factoring time lines without perceptual disorientation requires a particular power 7 (tetra spin) based braid coherence in DNA geometry. (The “Boson” signature of the Montauk boys.) This was the mechanical wormhole through time superluminally made when DNA was braided, envelope upon envelope, with enough implosion to penetrate time. If not, only scrambled eggs returns from the time corridors. The proper DNA braid to enter time windows was a soul matter related to the recursive turn inside out, which is the skill of sustainable compassion itself. (The so-called Montauk Project may have been a failed example of this principle.)

Claire Watson, an independent researcher into the mysteries of ancient Crete, depicted the Ophanic Enochian script letters as the star gate navigation language of the Sirius craft. Robert Morningsky, a native American UFO lecturer apparently read the Sirian/Ophanic letter forms on the strut of the crashed Roswell craft. In each case, the very alphabet of the civilization is connected to the magnetic symmetry turns necessary to thread magnetism through worm holes, black holes, star gates. The genetic upthrust of the evolution of the species, turns on its ability to transform its DNA braid implosion into the thrust of collective magnetic perception of the very star systems that beget them.

In other words, we turn the light imploding in our genetic material into a worm-like periscope that allows us to insert perception and awareness gathering into tunnels through star gates, black holes, and time. The symmetry turns necessary to do this shamanic thrusting or Djed raising, becomes the alphabet of the civilization, because this is the highest value service the genepool has to render to the star sys-

tem/galaxy in which it is born. The gravity dance that enables star systems to sustain their spin pattern recursion, requires the insertion of self-reference/self-awareness.

Star systems cannot be born without the self-awareness (or angel body) on which collective planetary emotion feeds. Not only, as Gurdjieff said, does coherent emotion feed the Earth, (make gravity) but collective coherent emotion feeds galaxies the ability to birth sustainable star systems. So, this brings us to the recent stories of angel families and their family “squabbles.” When we were told that Michael and Lucifer had different ideas on how to empower the humans to bend light, we probably got far too dialectic and judgmental.

Just compare for a moment, the story of

Michael vs Lucifer

Michaelic vs Ahrimanic

Cain vs Abel

Jew vs Arab

Aku vs Draku

Humanoid vs Draconian

and ask yourself: What are the common threads in this colorful cosmic “Hatfield vs McCoy” family feud?

Maybe if we understood, we could help heal the family. So who were the families in the first place? The way the Ophanim (O-Phi-in-him: O turn into Phi, I am — or literally, “The Whirling Ones,”) tell the story: They selected 1254 star systems to project their charge, into a cat’s cradle of potentially self-aware capacitance, in their image and likeness. The gravity field that resulted from this literally bodily projection, became our solar system and Earth. (Gravity, as the fractal embedding of charge, is the physics of astrology) If we blink slow enough at the geometry of those star systems, (or set “leave trails on” in Voyager II on your Mac, and animate paths for one precession cycle) we see the anthropomorphos of a body. Solar systems over one precession, including the paths from the planets, appears like a sperm. An example of this created human awareness by star-projection of body form can be found in the shape of star systems film projected on the land by the zodiacal landscape of the arrangement of the Gothic Cathedrals across Europe. (Clearly the fingerprint of an Ophanim project.)

This cosmic family decided that by experimenting in higher density emotions, (more layers of fractal recursion) they could create potentially more leverage on galaxy birthing. In other words, the angels wanted more efficient ways to get self-awareness incarnated into the worm-holes which glue galaxies together through time. In practical terms, this means that when you finish being human, you go play with the angelic logoi making stars inside our unfolded magnetic body.

This is what the Andromedan's meant when they said the roots of our genepool came from the 11th dimension. (The Andromedan's description of these powerful genetic ancestors as "Paa Taal" is likely the same Ophanim. They are the implosive emoto-kinetic leverage nascent in our genepool) Super-impose spin in DNA recursively with enough braid envelope embedding (11 layers) you get waves on the magnetic scale of Angelic Logoi — Galaxies. This is what the Aboriginals meant when they said their Shamanic Guides were the Keepers or Lords of Time. The Orion Queen (Magda) blood line knew enough to discipline marital choices; the greatest fear of the aboriginal chiefs on the return of the Keepers of Time (Ophanim), was that they may not have kept the marital laws well.

This is what the American Indians meant when they said their genetic roots were the winged ones — the Bird Tribes.

Again, practically speaking, this means that to get out of kindergarten here, you need to lucid dream with the threads of enough shamanic memory to remember where you turned, (Right at Orion, Gilgamesh!) to get your periscope up out of the astral Bardo, into the Zero Point experience of the Galactic Core, the Ancient of Days. (Otherwise your memory dies with your body, soul-less.) And what happens then is rich. From those chromo-sums were one phi-itch. The wave implosion in the DNA began to braid unto completion of the ultimate concentric wormhole.

The colorful controversy was this: Should we, the kids of the angels, braid our DNA (and fabricate our ecosystems), by bending the light (magnetism) inside our bodies using emotion? Or, should we, the kids of the angles, braid our DNA (and fabricate our ecosystems), by bending light outside our magnetic bodies using technology.

This was the start of the whole Aku vs Draku, Michael vs Lucifer, "war" among the angels. It was really a useful little difference of opinion.

If you were of the Aku persuasion, you would then move a mountain and shape a cloud or a jet stream by focusing on the magnetism in your glands and shaping it. If on the other hand you were of the Draku persuasion you would move a mountain or shape a cloud by building a bulldozer or designing a cone capacitor. Both approaches were educational. In one case you would imagine a shape inside your body, in the other, you would imagine that shape to be outside. It really began quite simply.

(The Draku were exoskeletal and outward focused; the Aku were endoskeletal and inward focused. Techno is outside-in; emotive is inside out.)

It gets even more colorful when you track where the Hatfield vs McCoy, or rather Aku vs Draku, Michaelic vs Ahrimanic, family blood-line specialization lead them. In the case of the Draco, in the time of

Egypt you get the Amon-Ra, the hard making technological pharaohs. The reptilian descendants of the Draco learned to eat gold to fabricate immortality, technologically, in the blood's magnetic immune systems. Gold's valence fractality, made soluble in blood, creates wormhole implosions in the blood that electrically cancels the unsustainable emotions, promotes hive consciousness, and technologically fabricates an immune function that is virtually immortal but unfortunately potentially soulless. (If you stop dying, you forget how.) This Gold hunger was the Draco excuse for the gene-splicing experiments to make Gold Mining slaves, which began the major branch of our DNA according to Z. Sitchen. Later, in desperation, you get devolved Draco's doing frantic gene splicing with their Gray droids, trying to make self-organizing wormhole sustainability in DNA (soul), as the Ophanic soul testing time implosion approaches.

The Toltecs held some high moral memory from Atlantean priests. The Aztecs, however, worshipped a central Marduk-type god who was merely a priestly front for the Draco/reptilian, hungry to be fed human sacrifice. The attempt to eat immortality from the outside, by eating Pineal glands, also falls in this category of devolved Draconian. (Why did Hitler burn the split skulls of concentration camp medical experiments? Who did the Aztecs feed the human sacrifices to? Where do the harvested missing children go?) While we may get caught up in the awful emotion in the reality of these tragedies, we still need the context, the meaning. Of course the pineal stored the most recursive of the bodies' magnetics. But, in the long run, is the best way to remember the conversation to eat the telephone?

In the case of the Aku, you get the Aku-naton, Akhnaton of the Pharaohs. Bucolic, familial, feminine-empowered, but unstable. Very good at sun worship, but rather poor at balancing the checkbook. Very good at using blue blood DNA to regulate climate, very poor at stabilizing the royal treasury and politics. Today you have angelic families getting more discriminatory of which human bloodlines to call family.

The experiments with Barbara Marciniak's friends and the "Pleadian" community allowing high Dracos to enter human bodies during actual feelings of compassion, may well be a turning point. A Draco may now choose to die, a useful passage.

The Aryan bloodline was high on reason, low on compassion. The geometry of compassion was the skill to navigate the magnetism entering the heart, to learn to turn inside out. Technology was a reach outside; emotion was a reach inside. When the Serpent Feeds the Eagle, Quetzlcoatzl returns, the many plumes of vision return. When the high amperage or flow of Draconian reptilian brain emotion feeds the high fractal of the Sirian/Pleadian mental functions, then a new Aquarian era dawns in the leverage which emotion will have upon the grids.

By choreographing a time implosion through which only soul wormhole-coherent memory can penetrate, the Ophanim arrange a type of sort function among family lines who have learned their lessons. Only the ensouled (imploded DNA) will survive. Other genepools end.

The Diaspora of humanoids after the last Orion war, returns, necessarily, to the Bethlehem of their "umbilicus" into time. The pregnant time bubble pops as the line forms at the time portal birth tunnels squeeze: here in our sector, Ea's Earth. The Pleadian and Sirian humanoids again encounter the archetype reptilians of their spinal roots, for one more colorful kundalini sting of ourselves into ourselves.

Hydrogen's frequencies, heart, solar heart, sun flare, planet orbit, and the star chart's "holy cross" erection, are all closer now to the PHI embedding. This concrescence into time implosion is a carefully mid-wifed birth by and for angels.

So how shall we test for the physics of Angels — physicists being an appropriately skeptical genepool? Does a frequency signature of the x-rays in the accretion disk that proves the presence of the black hole, and test for log functions of Phi in the frequency ratios? If the Ring Pass (k)Not is recursive, is it therefore self-aware? Angles/Angels are spheres of influence for waves. When those pressure spheres become self-embedding recursive, we call them spheres of consciousness. Hence the term: guard-I-an angle.

In summary, it is Orion's belt where the stars are born. It is here that the soul's genetic magnetism is focused from the Bardo by the Great Pyramid. It is here that collective Bardo can meet with birthing star-systems. The cocooning of genetic memories into the birth of star systems is the gate into stellar incarnation for souls evolving from human origins. The formation of gravity fields that are sustainable requires this.

It is not enough to know the theory of how emotional and perceptual magnetism is the glue for tectonics and star systems. This is only a humble introduction for those with the shamanic chutzpah to do it. Do you remember your dreams? Are you lucid in the dream's spell? Super-nutrition (live food), tantra, round breathing, and hydrotherapy (bathing in living water), helps give escape velocity to the magnetism of the pineal out the crown. Are you able to steer that worm?

You might not have to die in order to learn how.

Orion nebula from which stars are born.

THE IMPLOSION PHENOMENON: UNPREPARED FOR THE IMPLOSIVE NATURE OF LOVE, THE PERSONALITY FRACTIONATES

Interesting that Marty Wuttke, a clinical physiologist in Georgia, reports that alcoholics lose their addiction, with clinical permanence, when they learn the flexibility to get a nice harmonic cascade balance of alpha and theta harmonics in their brain waves. Now we have Thoth commenting that balancing brain harmonics into the theta range was a specific key piece of the Egyptian initiatory rituals. What we learned from the addicts is confirmed in spiritual initiation: addiction was a substitute for ecstatic process. The goal to achieve theta/alpha balance was a waveguide to ecstasy. Remember, ecstatic is a name for the charge of Eck, energy, in stasis or stillness.

In other papers, I presented a model which suggests that ecstasy is achieved specifically as a wave alignment which looks like a caduceus. What it does is to create a spin path to the zero point. This way the very high frequency and spin dense waves of the matrix or nexus or zero point (the word GOD also fits nicely here) can be connected in an orderly spin path down into the wave lengths our awareness normally bumps into. The collective unconscious resides in the information compression which your PC calls fractal. It is the only compression which makes information so infinitely shareable that passing the files around becomes literally free of energy cost. Fractal data is packed when your heart learns the skill to arrange it's long wave sound and voltage in Phi related donuts or fields (Lo-Phi or Love for short). This embedding algorithm is the inviting and fractally attractive skill we call learning compassion.

The recursive, self-aware nature of this wave turning inside out through center by fractal implosion is the leverage to bend spin by being and creating center. Laymen's terms for leverage to bend spin would be: BEING. Physics, desperate to avoid emotion, uses words like quantum operator, wormhole, fractal attractor, and prime mover, since there is no wave mechanics for emotion. Pity, since emotion turns out to be quite clearly the most interesting and potent wave mechanic around.

In effect, the skill to arrange waves in 3D Phi nests (pents, dodecas etc.) is the only way spin gets permission to implode. This is because as we have explained many times elsewhere, only adding and multiplying

wave interference, gets spin between wavelengths, and thus down the ladder of geometry into implosion. Otherwise, the spin becomes self canceling, and no pressure or awareness density can convene. Or, in the Language of Blazing Tattles, where there is flame, waves have agreed! Phi or the Golden Mean is the essence of wave agreement and love. In this sense, romantically, implosion is our best connection technology.

By connecting harmonic pressure nodes between all wavelengths, the physics of implosion technology effectively breaks down all barriers. This is good to the extent that some symmetry is shareable between all systems. This is bad if there are some systems which just haven't achieved the symmetry discipline to become shareable. In psychological terms, this is called, preparing to die.

The psychodynamics of still point access, and the awareness doorway through death is based on exactly the same physics. Gain enough coherence and spin density, then awareness will extend like an eyeball through a pipe, through the light speed barrier. But massive coherence is ONLY possible (as we have discovered in our EKG and EEG work) when the harmonics are recursive, or self-embedded, or Phi based, or self-aware. This is because large numbers of harmonics cannot exist in the same focus in ratios based on two, duality, only in ratios based on Phi.

Massive Phi coherence is the only door through the speed of light, and therefore Time (as simple relative spin) since it is the only way to launch a harmonic cascade that by proper constructive interference between elements of braid can be launched up the harmonic ladder coherently enough to get faster than Light In practical terms, this means that only DNA braided recursively by Love in the EKG makes it through death, the nexus, the still point, rapture.

Schauberger caught the spin-going-down implosion, and made electricity from a mineral water vortex. The Alteans got atmosphere nestled about Mars and Earth by tuning planetary magnetic implosion (gravity) using stone dolmen as lenses for magnetism to make fractals of the planet grids. If we hadn't forgot that geomantic technique, we might still have a chance to keep our atmosphere today! (Too much gravity: no biology; too little: no atmosphere. The tightrope is danced with dolmenic grid engineering.)

Gold only occurs on planets where the magnetic lines are fractal enough to birth gold veins. This is because gold is the most fractal of atomic elements. Fractal magnetism is the birthplace of gold, just like gold, then made soluble in the blood, creates fractal tunneling. It is true enough that ultimately if we do not live on magnetically fractal (geomantic) land (where magnetic lines look like rose petals nested), and if we do not eat fractal (or spin dense) food, then we are literally dead. (In the specific sense that life is recursion, and evil is live, El-into-eye-of phi, spelled backwards.) So yes, obviously if your choice is irra-

Gold

diated chemical broccoli with spin dead pasta and carcinogenic oil, or fractal gold powder manna, you say, here's my check, I'll take the pill. Gold is fractal, I heard if you eat the fractal wormhole, you live forever. Where is the fine print here?

Reading fine print means accessing spin in and out of fractal compression. (Certainly what the alphabet was designed to teach: each letter is infinitely fractal and recursive and a spin path in and out of a fractal rose, from every symmetry perspective consumed.) Interestingly, as we look at the hazards of eating the gold as a fractal, we will at the same time be looking at the hazards of:

- Phi base sounds implosion technology
- Phi based biofeedback
- Premature kundalini

You get the flavor. The illusory Messianic tendencies of those who spend too much time in the Holiness of Jerusalem, without strong contextual personality structure, is a well described psychological syndrome: The Jerusalem Syndrome. The characteristics of the Jerusalem Syndrome are pretty much as Thoth described the hazards of too much Gold Powder without Shamanic context, except with even greater emphasis on Messiah complex type problems.

The physics are easy to understand. You get toward the centroid of massive magnetic fractal worms, and if you try to touch without an orderly spin path in to that zero point, you will get burned. In order to take advantage of the spin, which lightning offered to protein in the primal soup, only those ready to enter a new axis of symmetry's best recursion survived into DNA. The rest, the vast majority, flew apart.

Sounds like our headline quote again: fractionation of the personality. Supposing you take a computer bus line, and accelerate the megahertz by orders of magnitude, without first checking the discipline of the master oscillator, and the switching/sharing rate of the nearby memories. It is pretty easy to take a low baud rate machine and turn it into trash if you crank up the speed without attention to how the internal sharing architecture is organized.

The architecture which permits best sharing is always the most compressed. Compression is never perfect until the symmetry is Phi.

So, if you take too much wormhole tunneling in the blood, induced by gold powder, you do suddenly hear all your ancestors at once whispering to you out of what is now their DNA. The problem is, you haven't yet learned how to do all that sharing at one time.

Yes, this compression problem is also at the same time the universe's most interesting file-sharing problem. Now, if we were to call in a networking consultant, he would tell us that in order for four billion people to share a file all at one time, everyone would have to agree on every change made.

This seems tricky. What would be a sharing routine which would allow all of us to agree on every change made to our central file? How shall we resolve this squabble over the sharing of genetic memories in our cubbyhole in the galactic petrie dish? If we do good, maybe the angels will promote our children. If not, for which galaxy shall we serve as manure?

Here is the essential issue. How do you recognize a truly shareable thought, so that you can hold it like a candle flame to immortality? You were wandering down the alley of your life, and one time in a billion, you do indeed trip over a shareable thought. At that moment generally you feel a definite tingle. (I do.) What happens is a wormhole forms, and your light speed got another dose of lightning. Enough of this, and sure enough there you are, never having to die, because your filing cabinet never needs the unshareable filtered out again. When you can string pure shareable (pure principle) thoughts together, one after the other like an eternal golden braid, then suddenly, you are eyeball to eyeball with GOD and VERY immortal. Pure principle, pure recursion, pure self-referencing awareness, pure shareability, pure love, and what makes it through every wormhole are all exactly the same thing.

The file-sharing trick is solved ultimately and always by the laws of symmetry. Congress hasn't repealed them, because Congress hasn't discovered them. Take symmetry operations to heart, and what do you got? A fractal. As above so below, I am that I am, and all that. How does this translate to sharing under pressure? The heart braid pressures best by turning inside out. This happens when fear changes to love, resistance to sharing, in the shape of the breath wave. Fear resists spin (a mind or recursion killer). Anger jerks the spin up sharply. Love is a wave whose maximum is .618 into the duration of the wave. This is true of how to breathe and how to touch in order to love.

So the advice was: (something like going into ritual as if to a lover) prepare yourself as if you were about to die before you take gold powder, or stand in the implosion sound, or touch the fractal magnetic monolith. This is called Petit Mort: little death (RAPT-SURE).

If you die a little bit, that is prepare yourself a little bit each day for the no secrets, everything is shared, mode then it won't sneak up on you all at once leaving you clueless... eyeless in Gaza. Those who get the most out of the death experience are those who, with gentle comfort and self confidence, enter the stillness with their eyes open and their memory working. This is only possible with a clear mind, unfettered by panic, and surrounded with intention. Intention directs the bioplasmic streamers like waveguides for arrows through wormhole songlines.

THE GEOMETRY OF ETERNITY: HOW CONSCIOUSNESS SURVIVES DEATH

Consciousness is a geometric extension braided as the wave nodes radiate symmetrically around our focus. Thus awareness is concrescence of pressure node permitted by symmetry to all be "in touch" with the same center at one time/ one spin. The profound note here is that dying, or entering the dream state consciously, requires understanding these vortex paths which allow symmetry to include your added mindfulness. Taking your memories into the inner world requires a simple map based on super-imposed spins.

Omni magazine featured an article some time ago describing something called the "Kluver" form constants. These were geometric descriptors synthesized from the shapes for passageways seen in common by both near death experiencers and psychedelic drug users. They actually present to our view what may turn out to be a supplement to the "Tibetan Book of the Dead." Specifically, these synthesized archetypal forms may help us shape our conscious focus as we traverse the world between death and life and between the dream and waking worlds.

It is survival related to our collected memory to know how awareness is distributed at death, and during shamanic/ecstatic experiences. There are very specific pathways to negotiate in the fractal attractor we call consciousness in order to take our spin/memory contiguously between worlds.

The trick or key to knowing how to keep our memory whole at death resides in knowing how pattern is stored in general as wave systems migrate upward harmonically in higher spin symmetry. This is not only geometric abstraction, but practical instruction on how to live forever in memory with no inconvenient discontinuity caused by unconscious dying. As mind is recursive focus among waves, this is the geometric doorway (of Golden Mean foldedness) to higher dimensions. This is the only way awareness can distribute itself as spin.

Picture your awareness and way of calling memories to mind as a nice pretty nest of donuts one inside the other reaching out. The way these donuts or field domains call distant memories to mind is by setting up the conditions of fractality in symbol.

Let's take an example, suppose you wish to analytically reach a concept you may have set into the remote recesses of your memory long

Lattice

Cob Web

Tunnel

Spiral

Projecting the pair of vortices makes a donut. Project the seven turns on the surface of that donut onto a plane makes a Cretan or Minoan seven turn labyrinth. When this form is braided into the paramagnetism on the land, it gives magnetic field domain a place to turn inside out and thus self-organize. Walking the labyrinth is a kinesthetic way to assemble your magnetic memories into ONE.

GEOMETRIC KINDS OF GROWTH

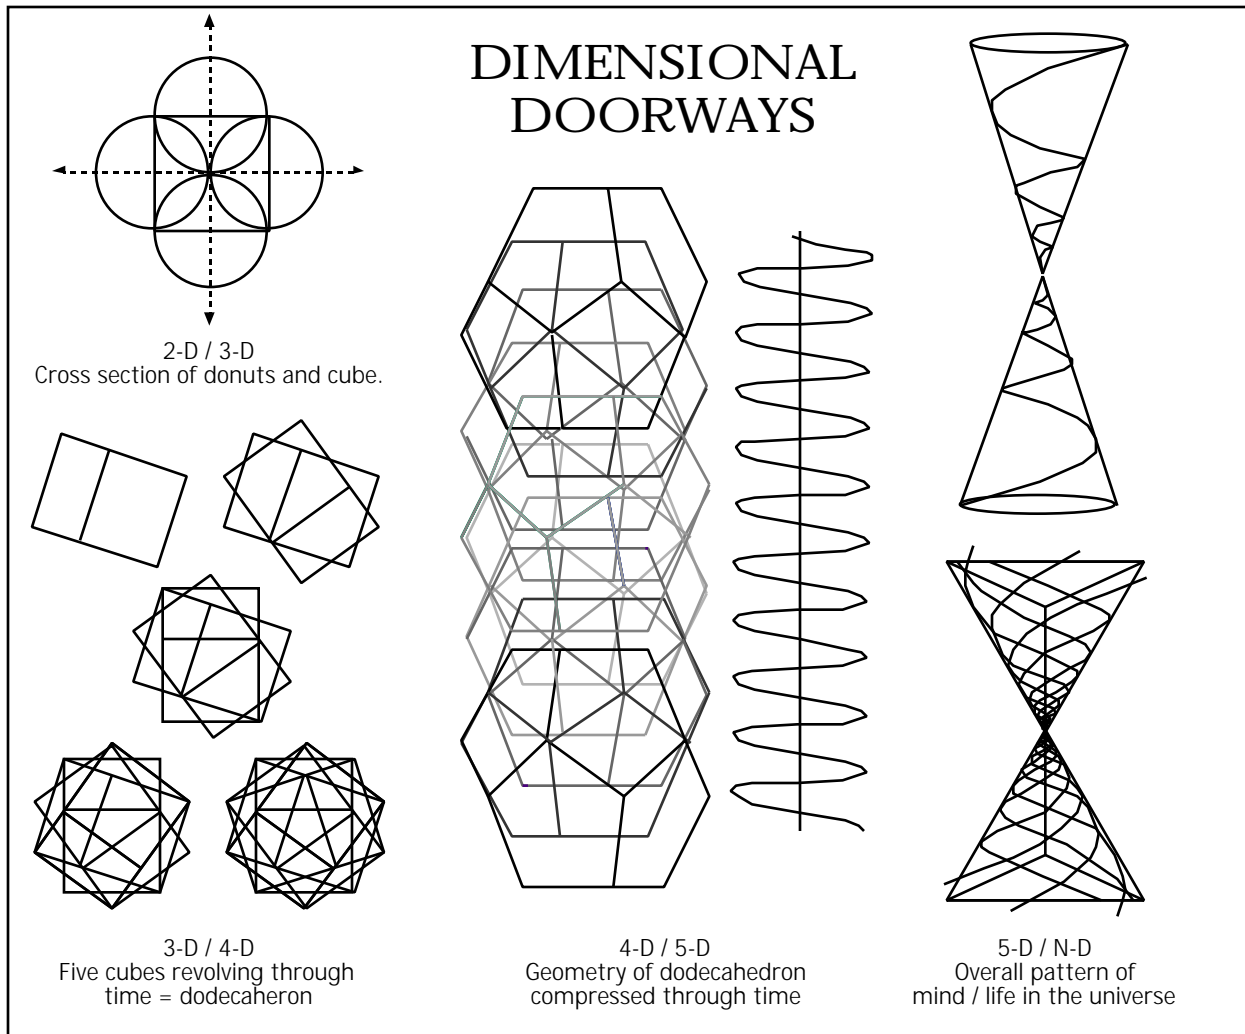

ago in school. You are quite aware that you can not directly call to mind the equation or abstraction you require. But if you call to mind the shape of the classroom, and personality of the teacher, you may gradually resonate toward more and more detail in the remote reaches of your memory. What you do in your "fantastically analytical mind" is set up many elements of image "self-similarity" in form to the idea you wish to retrieve. Then actual phase-lock to the required memory occurs by a process which might as well be described as "morphic resonance" or retrieval by likeness alone in the universal language of pure shape. The point is that a series of links ultimately reaching into the distance of symbolic relationship is achieved (as Whitehead described "sailing into abstraction") by setting up a series of more and more self-embedded ideas closer and closer to the required detail.

The conceptual leap we ask you to make here is to see the process of reaching into that abstraction as specifically the activity of getting the fractal of self-similarity built like a bridge between you and the conceptual distance you seek. The likeness unto what you seek, by which you call to mind elements closer and closer to the actual goal of remembering, may reach there either by fractal self-similarity in space or of fractality in time. You may call to mind more and more pieces of your situation at the point in either time or space at which you stored the memory. The point is that memory itself, like symbol and optical holograms, relies on resonance linkages, ultimately by phase locking .

The way awareness grows is by climbing this very particular ladder of symmetry. This is also represented in the way species evolve to complexity in their basic structural shape from phylum to phylum. The general shape of the outer structure follows these basic arrays. Each time a new axis of symmetry is superposed, the Golden Mean ratio becomes the optimum way to add recursion on that new spin. Only then can the next dimension be entered and self embedded.

Golden Mean ratio roof gables nest the top cube into the right dodeca-icosa/rotation. The lower helix of the ratcheted dodeca becomes exactly DNA when the braid ratchets in Golden Mean increments. Where the DNA helix comes to a point, making the vortex on the left, again should approach Golden Mean ratio when the inspired flame of recursive awareness is entering the harmonics of pure shape. This kind of phase-locking can transcend the scale of small or large, most ideally when the form used to do the link obeys the laws of fractal or self-embedded self-similarity.

In other words, the wave geometry of the song you use to recall a certain love affair ultimately creates a shape link to those intense emotions. Feelings and "words" (spin nets of pressure with enough symmetry to stand as wave) actually braid a resonant image in an acoustic geometry of pressure into the very braid of DNA and geo-dance of

pheromones and psychoactive hormones, and piezoelectric pressure sensitive recording medium called muscle. All of the net of similitudes which enable "total recall" collected together amount to none other than idealized "embeddedness" — or literally how to fold space or time for maximum shareability as an information pattern.

What creates a mind "sharp as a tack" is a set of mnemonic devices which are self-similar to their objects. They thus psycho-kinetically enable their "symbols to participate in the reality to which they point." Once we understand the fractal phase discipline which psychokinesis requires, we are closer to the emotional/mental focus required to achieve immortality in memory.

To really see what this onset of recursion means to the one universe of deathless wave memory, we must understand deeply the principle of fractal recursion which creates the wave attractor we call consciousness itself. In computer lingo, the more the data may be

arranged fractally, the more it can be compressed. Since data compressibility goes toward infinite when the shape of the data set itself becomes fractal, this is also the limit of how shareable the information is. As compression increases, ability to distribute grows exponentially. This is as true of integrated circuit chips, as it is of the form of human memories as elements of spin needing compression.

This points us toward the computer and spiritual concept itself which says that memory/distribution of idea or shape, is a test of shareability. Shareability among waves goes to infinite when all aspects of wave interference are eliminated. In 2D, simple octave wave harmonics attempt to get enough wave symmetry to permit survival of spin inertia. We call this music, and base it on cubic powers of two in ratio.

In 3D or more spin symmetry, this system for persuading waves not to fight quickly breaks down. The wave interference of cubes nesting as waves of geometries based on powers of two quickly creates whole nasty nests of destructive interference, if we beat or heterodyne their wave fronts. (When waves interfere or beat, they add and multiply). So only the Golden Mean ratio solves the problem of wave interference in 3D and higher spin systems. Because it is the only ratio which permits wave fronts to both add and multiply as they nest.

This is why the Golden Mean ratio arranges pent stars, and dodeca DNA helix, and the dodeca-nest fractal upon which DNA/Earth Grid and 12-faced Zodiac are based. (Merkabbah/mark-of-pressure). This is the most spin dense possible, perfect fractal in 3D. The Golden Mean ratio is the key to wave embeddedness and fractality in all of N-dimensional spin systems. It is the densest possible 3D fractal, and the geometry of Merkabbah and of Love, as the touch-permissive wave shape. Only this most self-aware (by compassion) love attractor has what it takes to bend the light, and thus make creating among waves possible.

All life forms are based on the recursion which pentagonal- geometry make possible. This is why we call life the L eye of phi — El-I-ph(i). It is the el turn into phi recursion which creates life, self-awareness among wave fronts discovering how best to call all pressures to center at once.

So now we are ready to grok with some impact more of the deep and wonderful mysteries of collective mindfulness, and memory that doesn't die. When memories discover the form of fractality, they then become distributable and thus deathless — as simple wave fronts looking for ways to conserve their spin.

I have written extensively about the way in which the harmonics contained in the heartbeat at the moment of compassion create a recursive nest. It is the embedded possibility of nested recursion among the fields around the heart, which have enabled us to measure the EKG changing DNA's braid angle at the moment of coherent compassion.
