

Could the the Charge Radiance of The "Magnetic X" Chromosome, depend of how well it is nested in a braid structure like a piezoelectric slinky?

The distinctive "X" in this X-ray photo is the telltale pattern of a helix.

New Scientific Model Add's Fuel to the Evidence That Genetic Engineering Threatens "Self-Organization" in DNA

GMO - Genetically Modified Organism - New Summary for Decision Makers -

July 30, 2001 - Amsterdam, The Netherlands

It must be agonizing for compassionate government and United Nations leaders to make decisions about the future of DNA, knowing full well that either way millions of people are now starving to death and billions may follow them. Immense political subterfuge as well as multi-national corporate fortunes have lined up squarely in support of GMO against relatively underfunded conscientious academics like those 445 Scientists who recently signed the..

Open Letter from World Scientists to All Governments Concerning Genetically Modified Organisms (GMOs) at Institute of Science in Society , <http://www.i-sis.org/> - Signed by 445 scientists from 54 countries

* The scientists are extremely concerned about the hazards of GMOs to biodiversity, food safety, human and animal health, and demand a moratorium on environmental releases in accordance with the precautionary principle. * They are opposed to GM crops that intensify corporate monopoly, exacerbate inequality and prevent the essential shift to sustainable agriculture that can provide food security and health around the world. * They demand a ban on patents of life-forms and living processes which threaten food security, sanction biopiracy of indigenous knowledge and genetic resources and violate basic human rights and dignity. * They demand more support on research and development of non-corporate, sustainable agriculture that can benefit family farmers all over the world.

This letter was submitted to many governments and international forums including: -World Trade Organization Conference in Seattle (November 30 – Dec. 2, 1999) * UN Biosafety Protocol Meeting in Montreal (24 – 28, Jan. 2000) * UN Commission on Sustainable Development Conference on Sustainable Agriculture in New York (April 24-May 5, 2000) *UN Convention on Biological Diversity Conference in Nairobi (May 16-24, 2000) *United States Congress (29 June, 2000) * US National Academy of Science (16 April, 2001)

We can only urge the deciding leaders they MUST in good conscious read the huge body of academic literature about GMO hazard assembled by Dr.Mae-Wan Ho in her "Genetic Engineering-Dream or Nightmare: Brave New World of Bad Science and Big Business", and their related Institute of Science in Society , <http://www.i-sis.org/>

The purpose of this document is to update leaders with a perhaps even more radical and far reaching concern about genetic engineering as it is now practiced.

Could DNA be in fact literally self-organizing and self-aware by virtue of the geometry of it's "wrratchet and braid" and if so, what does the re-splicing and re-spacing of codon groups do to that self steering ability?

Two years ago, Dr. Depak Chopra invited Systems Engineer and Biofeedback Inventor, Daniel Winter to present a new theory at their LaJolla, CA lab. Dr. Chopra had already concluded that SELF-REFERENCE was the limiting and defining condition of SELF AWARENESS and therefore consciousness. Winter's co-presenter there, Martin Wuttke (iffm.org) had already shown that neurofeedback based on this harmonic inclusiveness theory, did sustainably aid in eliminating ADDICTION and Attention Deficit, clinically. After his presentation there, Chopra and his research director Dr. David Simon, indeed concluded that Winter had in fact found a way - by analyzing harmonics - to MEASURE that SELF-REFERENCE and thus measure SELF ORGANIZATION in wave function.

Since that time, Winter has successfully invented, and offered to the world his technology of measuring SELF-AWARENESS - as applied specifically to the heart. His invention - the HEARTLINK (www.heartbeat2000.com , www.soulinvitation.com/sbheart1.html , www.heartphire.com) measures internal COHERENCE and something he calls EMBEDDING in the heart's harmonic music. (power spectra of EKG). He found that when people are feeling open and blissful - literally compassion, their heart's voltage sings a chord which chooses a measureable musical fundamental based on the Golden Mean Ratio, and not Octave powers of 2. This also turned out to be a way to measure the "FRACTALITY" or simple - harmonic inclusiveness in the Heart Rate "Variability" which Dr. Dardik of the Olympic Medical committee showed statistically correlates with ended MOST KNOWN CHRONIC DISEASES ! (www.soulinvitation.com/dardik , www.soulinvitation.com/dimple).

So what does this Heart "EMBEDDING" theory have to do with the survival of DNA?

Well recently Winter has extended his model to suggest that in fact Golden Ratio harmonics are the key to EMBEDDING in general, and therefore the key to self-organization out of chaos, FOR ALL WAVE SYSTEMS. You see it just happens that DNA as a wave structure has more Golden Ratio nesting in it, than just about any structure alive. First, Winter's theory of Artificial Intelligence based on the harmonics of perfect embedding or nesting, was written up for a University in Portugal (71 Pages being re-translated at soulinvitation.com/fred).

Then Winter traveled to genetic engineering research centers in half a dozen or so countries proposing his model for testing (Decode Genetics, Iceland ; Gene Control s.a. Geneva ; Genetic Lab, Univ Basel, etc.).

What Winter is saying is simple to summarize, tho it is helpful to see the pictures. He contends that the wave organization of DNA by being so Golden Mean based, or recursive, or 'fractal' allows it's nesting structure to BRAID itself in such a way as to produce IMPLOSION (the opposite of explosion).

The Programming Language appears to be quantum wave harmonic interferece, which musically precisely requires the SPACING of the CODONS which geneticists currently call JUNK!!

Imagine that your local genetic engineer thought he understood the PROGRAMMING LANGUAGE of DNA, when really he had only cracked the lo level 'machine code' and was still unaware that higher level programming languages like BASIC and C++ even existed for the CODONS! Imagine if the way DNA conveyed information as wave function was with grouping of codons whose wave mechanics were quantum and faster than light. (See William Pensinger's faster than light wave mechanics in DNA at <http://www.soulinvitation.com/magneticx>). There is an entire book in the genetics literature based on this idea that hi signal to noise ratio exists in DNA as a carrier, BECAUSE OF "CONTEXT DEPENDANCY" (Braiding). (See "Grammatical Man-Information,Entropy,Language and Life" by Jeremy Campbell.).

Winter contends that DNA responds as an sonic electric SLINKY by BRAIDING in response to current HEART SOUND emotion. He even suggested the studied which MEASURED this effect of the heart 'bliss' coherence on DNA. (soulinvitation.com/rein)

The T

BLIS

'Recursive NON DESTRUCTIVE COMPRESSION,
Perfect Adding and Multiplying of Waves -
'Golden Heterodyning

The TOP DOWN VIEW of DNA is 10 Golden Mean Spirals
When the BRAIDING happens in UNDISTURBED DNA

BLISS process- 'ignites' the blood.. Coherent sound and UV
from DNA would prove this by harmonic analysis

Phi
Ratioed
Recursion
Creates Suction
Which Turns
Inside-Out,
Dimples into
Tornadoes,
Spheres to Toroids
Donuts,
Eggs to
Babies

He suggests that **DNA is literally programmed by emotion**. This happens as active sites get access to outer RNA BECAUSE OF THE WAY DNA HAS NESTED SONICALLY IN IT'S BRAID RESPONSE TO HEART and GLAND SOUNDS. He believes this may answer the mystery of how intense emotions switch on and off active sites within genes. He further insists that the BLISS process which native tribes practiced in DANCE etc. in this way of braiding in added CHARGE or spin density, provide COHERENCE and literally feed the immune system via genes nesting.

In summary, the elegance of millions of years to structurally space the codons in groups based on implosion, is probably what makes genes coherently superluminal - that is faster than light. **It is Winter's contention that sustaining this tornado faster than the speed of light up the zipper of DNA by implosion, is how DNA acquires spiritual qualities like memory thru death etc. This fire in the worm of DNA measured by recursion happening, is according to Winter clearly the way DNA becomes self steering as a wave.**

You are urged to read the scientific outline of Winter's approach to measuring when DNA loses coherence and loses embedding at www.soulinvitation.com/decode If it is indeed possible to measure when DNA becomes less organized as a wave, then clearly our genetic engineers are

Now let us apply this insight practically to today's genre of genetic engineered foodstuffs. For one thing, the practical notion of what determines when DNA is losing coherence, internal fractality, and ability to self-organize, desperately needs to be recognized. There are many books such as "The Gaia Hypothesis" and "Willed Mutation of the Species", which suggest very strongly that our collective genetic evolution, and genome as a wave body, are self-steering, and possessed of will and intent. Are we so naive as to believe there is not some structural relationship between the BRAID in our DNA and the ability of it's wave mechanics to create self-awareness.

What Winter is saying may be summarized in the following parable: The Shaman walks out from his town to meet an approaching TORNADO quite aware that if he does not persuade it to change it's path, it will destroy his village. In the INCA way, the Shaman consciously sends a magnetic current out from his belly, saying he is "EATING THE HOOCHA (the 'ANGER" / that which is NOT SHAREABLE?) of the approaching tomado. Specifically he is choosing by compassion, to FEEL FOR THE TORNADO magnetically, more than it feels for itself. (Winter claims that embedding can be measured in the Heart or in any wave system). Once the tornado falls in love with the Shaman, it follows him around just like a puppy would.

Winter suggests that ability to steer tornadoes, happens when you screw yourself into their electrical center of gravity by embedding. If ever there was a structure designed to EMBED by nesting, it is the Golden Mean geometry of DNA! If we fractionate and de-organize the wave nature of our genes now, without realizing

Here, brain and heart harmonics are analyzed in phase, revealing emotions peak coherence moments are measureable and teachable (see "HeartLink"). Exactly the same measures of the spectral emissions of DNA could show genetic engineers when DNA loses internal coherence, AND when it departs from the music of Golden Ratio self organizing EMBEDDING!

genes were designed to do - we clearly threaten the survival of memory for our entire race.

From this perspective, getting memory thru death if an experiment in non-destructive compression in the core of DNA. If the coherence engendered by lifetimes of embeddable memory keeps the braid or FIRE or implosion in DNA, then the wave continues thru light speed, and travels in time. Winter is proposing a physics for 'ensoulment' based on IMPLOSION in DNA.

This new wave mechanical ideal for genetic research, does not of itself say that no genetic manipulation is acceptable, it is rather one more compelling reason why we must urgently develop new criterion measuring success in DNA.

Since genetic material emits sonic, UV, infrared, and other spectra at various times during it's cycle, implementing this system of harmonic analysis is straight forward. What is clear though is the need for governments to quickly re-restrain genetic manipulation until such time as the concept of what makes DNA self-aware as a wave imploding can be understood even minimally.

Sustainability as a wave requires embedding. Dardik (ref above) proved this for the heart. HeartLink measures it. Sustainability as a wave is also necessary for DNA. We now realize that disease relationship to heart arrhythmia was hidden until we looked at this 'superlooping' or nesting in heart harmonics. It appears rather clear that we can only survive as a species if we understand this same principle for DNA. EMBED or DIE.

What is elegant about this new model is that it is so easily measureable and testable. If the DNA gains in coherence, and embedding, then it can penetrate and steer into it's wave environment, and thus self-organize.

Can we afford not to tell our genetic engineers what a soul is? Can we afford not to know how ave implosion into self-organizing self-awareness applies to DNA?

Data has already been gathered showing food production can keep up without our current GMO, now there is new and compelling additional logic to re-assess when DNA loses order. Our genes can be self-aware only if we are.
